Dylan Fliski

GRADUATE GAMES PROGRAMMER | UNITY C# | UNREAL ENGINE C++

Cheltenham, UK | dylanfliski@gmail.com | linkedin.com/in/dylan-fliski

PROFILE

Graduate Games Programmer with practical experience building gameplay, AI and editor tools in Unity/C# and Unreal Engine 5/C++. Published a Unity Asset Store tool and developed reusable combat AI, procedural generation systems and autonomous simulation agents. Strong in debugging, modular system design and multidisciplinary teamwork.

TECHNICAL SKILLS

Languages & Engines: C#, C++, Unity, Unreal Engine 5

Tools: Git, GitHub, Visual Studio, Unreal Blueprints

Practices: Object-oriented design, modular architecture, debugging

Gameplay & AI: Combat systems, behaviour logic, data-driven attacks, simulation agents

Unity Development: Editor scripting, prefab workflows, deterministic procedural generation

Delivery: Profiling, optimisation, iteration and cross-discipline collaboration

SELECTED PROGRAMMING PROJECTS

Easy Foliage - Unity Asset Store Tool *Unity, C#*

- Designed and published an editor-only procedural foliage tool for Unity 2022.3 LTS and Unity 6, supporting Built-in, URP and HDRP.
- Implemented deterministic generation, prefab previews, presets, drawn or shaped boundaries and focus-point placement, type-aware spacing and a maintainable programmatic editor UI.

Twisted Guardians - Enemy and Boss AI *Unreal Engine 5, C++, Blueprints*

- Developed a reusable Soulslike-style combat AI framework with detection, chase, leash/return behaviour, modular attack selection and cooldowns.
- Built data-driven attacks, telegraphs and hit detection exposed through Blueprints, while debugging C++ builds, AI states and team integration issues.

Evolving Marine Ecosystem - Final-Year Research Project *Unity, C#*

- Created a 3D autonomous ecosystem simulation focused on non-player-driven behavioural evolution, inherited morphology and emergent interactions.
- Implemented hunger, digestion, mating, eggs, ageing, resource selection, carrion, procedural plants, currents, research metrics, CSV export and performance optimisation.

RELEVANT EXPERIENCE & LEADERSHIP

Jam Coding - Assistant Code Coach, Cheltenham schools *Sep 2024 – Sep 2025*

- Supported programming and game-development sessions for classes of up to 24 primary-aged children, explaining technical concepts and troubleshooting student projects to encourage their interest in games development and develop their relevant skills.

Gaming and Esports Society President - University of Gloucestershire *May 2024 - May 2026*

- Oversaw the running of the society, including taking responsibility for its administration, leading the committee, managing communication with the Student Union, sourcing sponsorships and liaising with companies and other universities regarding events and game tournaments.

BSc Computer Games Programming Student Representative *Oct 2023 - Jan 2026*

- Represented the cohort by collating and sharing peer feedback in meetings surrounding funding, management and opportunities for our course, and provided peers with support for personal and academic queries.

EDUCATION

BSc (Hons) Computer Games Programming - University of Gloucestershire *2023 - 2026*

Second Class Honours (2:2) | Gameplay programming, AI, Unity, Unreal Engine and final-year simulation research

BTEC Level 3 Extended Diploma in Computing - New College Swindon *2020 - 2022*

Merit, Pass, Pass | Agile methodology, SDLC, Website development, Computer Networking and Security

GCSE Qualifications – Lydiard Park Academy

Nine GCSEs including Mathematics and English as well as Computer Science (Grade 6)

ADDITIONAL INFORMATION

Enhanced DBS holder | Current Front of House Associate at Wetherspoons | Previous retail employment at ASDA and KFC |
